Subject: air ops in New Orleans
Date: 05/31/2010 09:18 AM

Sam,

I heard some concerns about odors and respiratory irritation in the New Orleans east area, especially at night. I know that tracking down odor concerns can be really hard. But perhaps the evening meteorological conditions and/or additional flaring or venting by industry at night is causing something noticeable. I thought that it would be prudent to plan for 2-3 evening/night air sampling events in that area in the coming weeks, with the mobile teams and TAGA truck.

I asked for street intersections where sampling should occur and this is the list I was given:

Crowder and Chef Menteur,
Reed and I-10
Bullard and Hayne
St. Claude Ave and Caffin Ave
N. Claiborne Ave and Caffin Ave
St Bernard HWY and Carrol Drive
Carol Drive at Livingston
Corrine - 3 blocks from the corner of St. Bernard

I don't think we should sample at all of these locations, but perhaps at a representative location or 2, and then have the TAGA drive around the general area. Your call.

thanks.

Al
